Hello, Ubaldo Acosta greets you. Welcome or welcome again. I hope you're ready to start with this lesson.

Let's study the theme of BlueJ and Java.

Are you ready? OK let's go!

## BLUEJ Y JAVA

### ABOUT BLUEJ

- BlueJ is an excellent software created to get us started in the world of object-oriented programming.
- It facilitates us to see graphically the creation of objects and how they are modified as we execute our code
- However it is only a simulation, it is not a real programming environment, but a software to clarify several concepts in Java

### JAVA FUNDAMENTALS COURSE

[www.globalmentoring.com.mx](http://www.globalmentoring.com.mx)

BlueJ.org is a project that was created with the aim of facilitating the understanding of several concepts of object-oriented programming, and allows us to graphically observe various concepts that would otherwise be difficult to understand, and only with experience would we end up understanding it.

However, this type of software helps us to understand it more quickly and in a more fun way. We must bear in mind that this is not a real development environment and is only used with the aim of clarifying some Java concepts, but it will never replace a real project nor is it its intention.

We will create some exercises with the objective of observing how the classes and concepts we have worked from the BlueJ environment are visualized.
