Hello, Ubaldo Acosta greets you again. I hope you're ready to start with this lesson ..

We are going to study the topic of tables with HTML.

Are you ready? Come on!

HTML TABLES

table

tr	th	th	th
tr	td	td	td
tr	td	td	td

HTML, CSS AND JAVASCRIPT
www.globalmentoring.com.mx

The handling of HTML tables is very common to show our information. To declare a table in HTML, we have to define and understand several tags, such as:

table: Defines the element that indicates the start of an html table.

tr: table row. This element defines a rung, which will contain columns.

th: table header This element defines a data but that is a head of our html table. Using this element is optional.

td: table data. This element defines a data of our html table.

An example of an html table:

```
<table>
  <tr>
    <th> First name </ th>
    <th> Last name </ th>
  </ tr>
  <tr>
    <td> John </ td>
    <td> Smith </ td>
  </ tr>
</ table>
```

Next we will see an example of the management of tables in html.
