JAVASERVER FACES COURSE

EXERCISE

HANDLING OF MESSAGES WITH JSF

JAVASERVER FACES COURSE

EXERCISE OBJECTIVE

• The objective of the exercise is to modify our project to add the handling of messages in JSF. The result should be similar to the following:

Job Agency	V3	×	+		
← → C					
Name	Introd	luce your name			
Last Name			j_idt5:lastName: Required Value		
Desired Salary	0		j_idt5:desiredSalary: Validation Error: Specified attribute is not between the expected values of 500 and 5,000.		
Birthdate			j_idt5:birthdate: Required Value		
Send					

JAVASERVER FACES COURSE

EXERCISE OBJECTIVE

The objective of this exercise is to put into practice the concept of Message Management in JSF.

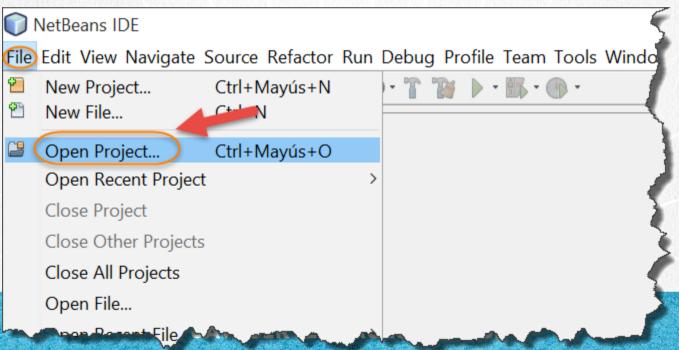

We will achieve this by changing each of the tags of type h: outputLabel by tags that will come from a properties file.

The result of the exercise visually does not have any change, it only changes the origin of the labels (labels) that are shown.

JAVASERVER FACES COURSE

1. OPEN THE PROJECT

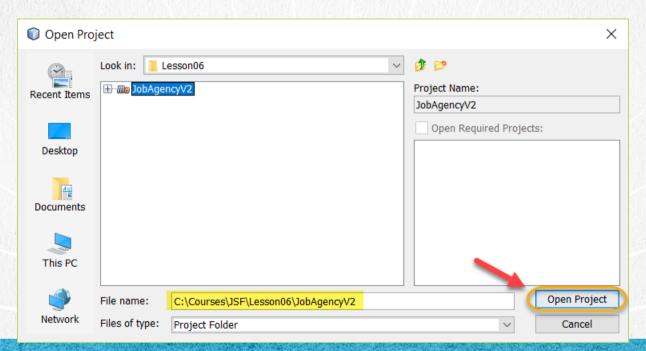

We open the JobAgencyV2 project, just in case we do not have it open:

1. OPEN THE PROJECT

We open the JobAgencyV2 project, just in case we do not have

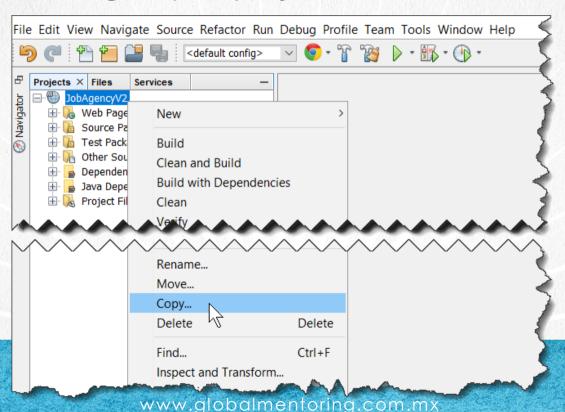

it open:

JAVASERVER FACES COURSE

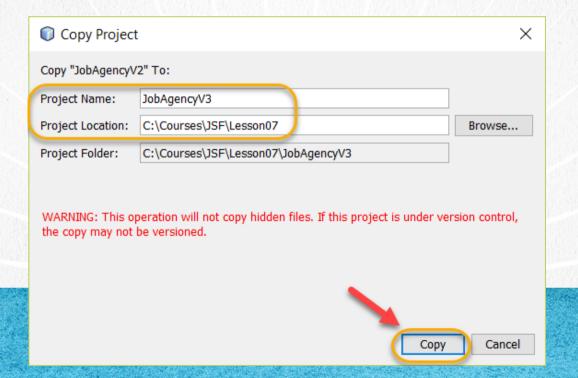

2. COPY THE PROJECT

We copy the JobAgencyV2 project:

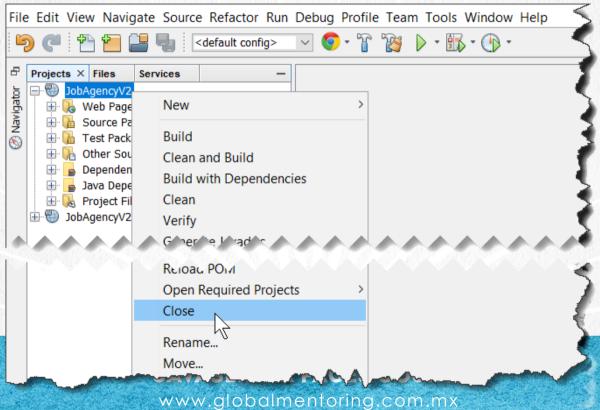

2. COPY THE PROJECT

We copy the JobAgencyV2 project, rename it to JobAgencyV3 and deposit it in the new path shown:

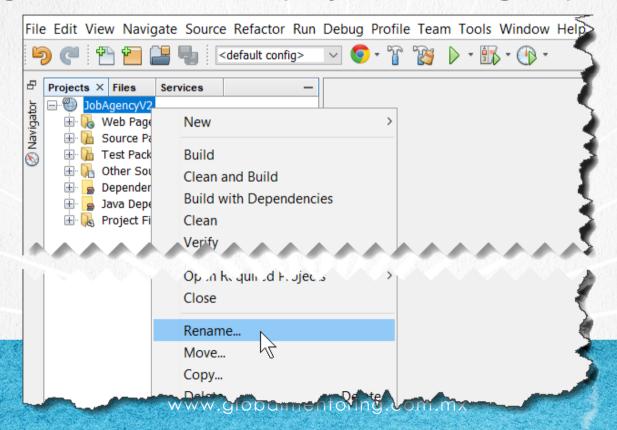

3. CLOSE THE PREVIOUS PROJECT

We closed the previous project, and left only the new open:

4. RENAME THE PROJECT

We changed the name of the project to JobAgencyV3:

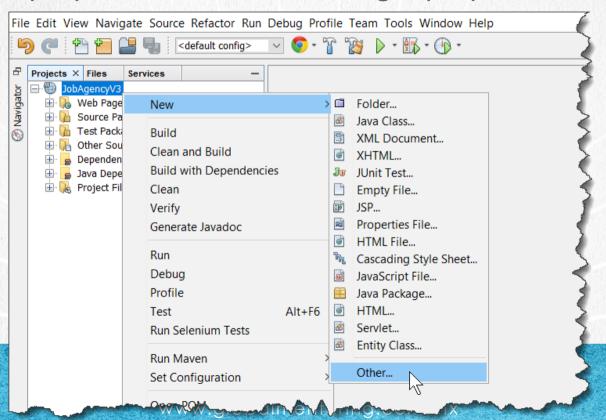

4. RENAME THE PROJECT

We changed the name of the project to JobAgencyV3:

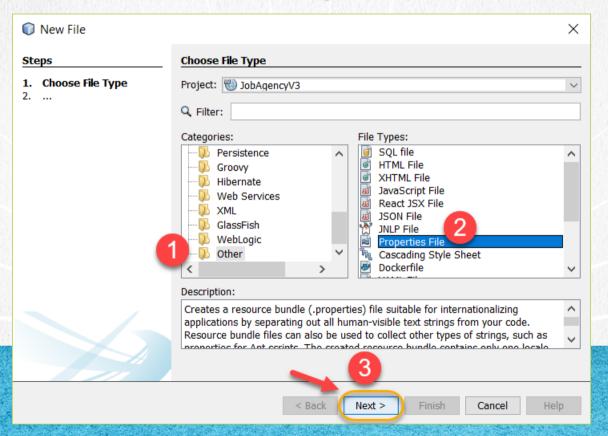

Rename Project "JobAgencyV2"							
✓ Change Display Name:	JobAgencyV3						
✓ Change ArtifactID:	JobAgencyV3						
Rename Folder:	JobAgencyV3						
	OK Cancel						

JAVASERVER FACES COURSE

We create a properties file called messages.properties:

We create a properties file called messages.properties:

We create a properties file called messages.properties:

New Properties File		×
Steps	Name and L	ocation
 Choose File Type Name and Location 	File <u>N</u> ame:	messages
	Project:	JobAgencyV3
	Fo <u>l</u> der:	src\main\resources Browse
	Created File:	C:\Courses\JSF\Lesson07\ <mark>JobAgencyV3\src\main\resources\messages.properties</mark>
		< <u>B</u> ack Next > <u>F</u> inish Cancel <u>H</u> elp

JAVASERVER FACES COURSE

6. MODIFY THE CODE

messages.properties:

Click to download

vacantForm.name=Name

vacantForm.lastName=Last Name

vacantForm.desiredSalary=Desired Salary

vacantForm.birthdate=Birthdate

vacantForm.send=Send

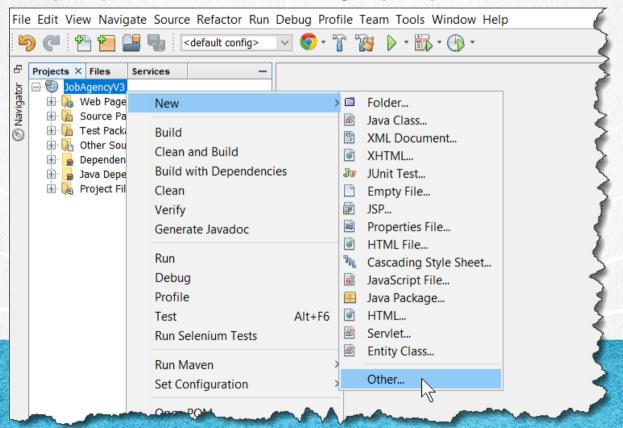

Sometimes it is convenient to change the error messages that JSF has by default.

In order to change them, we will follow a similar procedure to the previous one, creating a jsf.properties file, however the name can be any other.

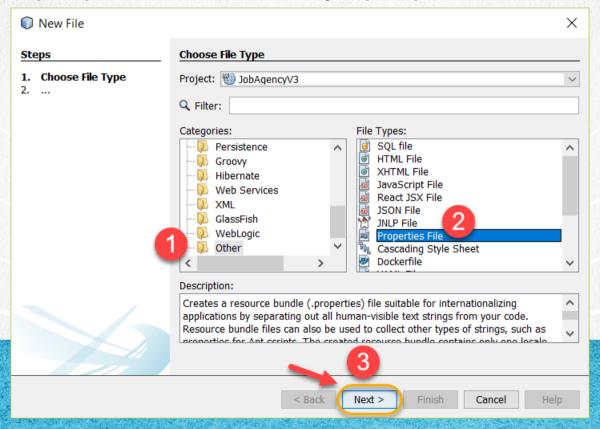

JAVASERVER FACES COURSE

We create a properties file called jsf.properties:

We create a properties file called jsf.properties:

We create a properties file called jsf.properties:

New Properties File		×
Steps	Name and Location	
 Choose File Type Name and Location 	File Name: jsf	
	Project: JobAgencyV3	
	Folder: src\main\resources Brow	vse
	Created File: C:\Courses\JSF\Lesson07 <mark>\JobAgencyV3\src\main\resources\jsf.prop</mark>	erties
	< Back Next > Finish Cancel	Help

JAVASERVER FACES COURSE

8. MODIFY THE FILE

jsf.properties:

Click to download

javax.faces.component.UIInput.REQUIRED={0}: Required Value

9. MODIFY THE XML FILE

We modified the faces-config.xml file. We add the configuration of the message management (resource bundle), the handling of JSF messages and we specify the language that we will handle by default in the JSF application.

JAVASERVER FACES COURSE

10. MODIFY THE CODE

faces-config.xml:

Click to download

```
<?xml version="1.0" encoding="UTF-8"?>
<faces-config
   xmlns="http://xmlns.jcp.org/xml/ns/javaee"
   xmlns:xsi="http://www.w3.org/2001/XMLSchema-instance"
   xsi:schemaLocation="http://xmlns.jcp.org/xml/ns/javaee http://xmlns.jcp.org/xml/ns/javaee/web-
facesconfig 2 3.xsd"
   version="2.3">
   fecvcle>
       <phase-listener>
           beans.lifecycle.DebuggerListener
       </phase-listener>
   </lifecycle>
   <application>
       <locale-config>
           <default-locale>en</default-locale>
       </locale-config>
       <!--form labels-->
       <resource-bundle>
           <!--No need to add the file extension-->
           <base-name>messages
           <var>msqs</var>
       </resource-bundle>
       <!--change validator values-->
       <message-bundle>jsf</message-bundle>
   </application>
</faces-config>
```

8. MODIFY THE XHTML FILE

We modified the file index.xhtml so that now we use the names of the labels, no longer in hard code, but those defined in the file of mensaje.properties.

Let's see how the index.xhtml file is already modified:

JAVASERVER FACES COURSE

8. MODIFY THE CODE

index.xhtml:

Click to download

```
<!DOCTYPE html>
<html xmlns="http://www.w3.org/1999/xhtml"</pre>
     xmlns:h="http://java.sun.com/jsf/html"
     xmlns:f="http://xmlns.jcp.org/jsf/core">
   <h:head>
       <title>Job Agency V3</title>
   </h:head>
   <h:bodv>
       <h:form>
          <h:messages globalOnly="true" ></h:messages>
           <t.r>
                  <h:outputLabel for="name" value="#{msqs['vacantForm.name']}" />
                  <h:inputText id="name" required="true" value="#{candidate.name}" />
                  <h:message for="name" />
              <t.r>
                  <h:outputLabel for="lastName" value="#{msqs['vacantForm.lastName']}" />
                  <h:inputText id="lastName" required="true" value="#{candidate.lastName}" />
                  <h:message for="lastName" />
```

8. MODIFY THE CODE

index.xhtml:

Click to download

```
>
                  <h:outputLabel for="desiredSalary" value="#{msqs['vacantForm.desiredSalary']}" />
                  <h:inputText id="desiredSalary" required="true"
                                 value="#{candidate.desiredSalary}">
                         <f:validateLongRange minimum="500" maximum="5000"/>
                     </h:inputText>
                  <h:message for="desiredSalary" />
              <t.r>
                  <h:outputLabel for="birthdate" value="#{msqs['vacantForm.birthdate']}" />
                  <h:inputText id="birthdate" required="true"
                                 value="#{candidate.birthdate}">
                         <f:convertDateTime pattern="MM/dd/yyyy" />
                     </h:inputText>
                  <h:message for="birthdate" />
              </t.r>
          <h:commandButton action="#{vacantForm.send}" value="#{msqs['vacantForm.send']}" />
       </h:form>
   </h:body>
</html>
```

9. EXECUTE THE PROJECT

Execute the Project:

Job Agency	V3 ×	+			
← → G	① localhost:8080/JobAgencyV3/faces/index.xhtml				
Name Introduce your name					
Last Name		j_idt5:lastName: Required Value			
Desired Salary	0	j_idt5:desiredSalary: Validation Error: Specified attribute is not between the expected values of 500 and 5,000.			
Birthdate		j_idt5:birthdate: Required Value			
Send					

JAVASERVER FACES COURSE

EXERCISE CONCLUSION

With this exercise we put into practice the management concept of Messages with JSF. We customize both the messages of the JSF form, as well as the error or validation messages that we could have in our JSF application.

In the following exercise we will see the concept of Internationalization, which will allow us to add several languages to our Web application with JSF.
