## JAVASERVER FACES COURSE

# **EXERCISE**

## HANDLING OF COMPONENTS IN JSF

**JAVASERVER FACES COURSE** 

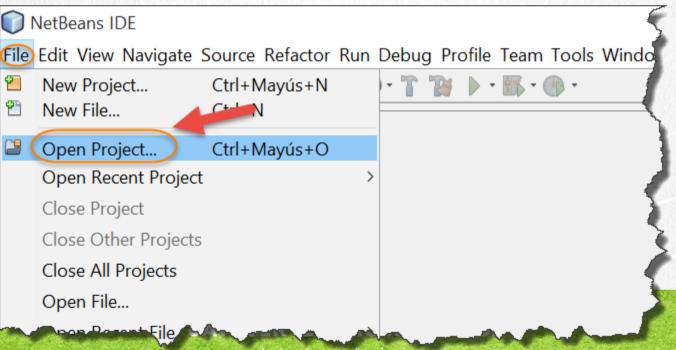

#### **EXERCISE OBJECTIVE**

The objective of this exercise is to implement some of the Components of those available in JSF. We will convert the City field from h: inputText to h: selectOneMenu. The result will be similar to the following:

D Job Agency	V7 × +
$\leftarrow$ $\rightarrow$ G	
Name	Introduce your name
Last Name	
Desired Salary	0
Birthdate	
Zip Code	85001
City	Phoenix •
Show	
Send	

#### 1. OPEN THE PROJECT

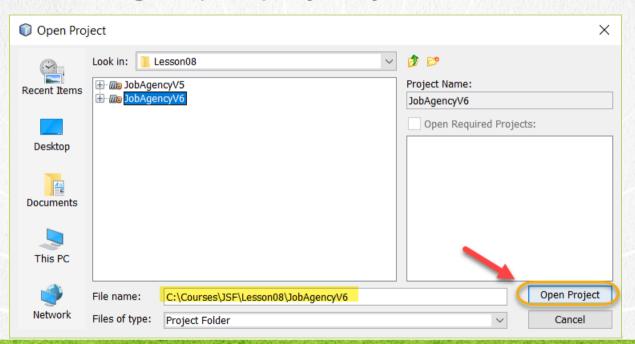

We open the JobAgencyV6 project, just in case we do not have it open:

#### 1. OPEN THE PROJECT

We open the JobAgencyV6 project, just in case we do not have

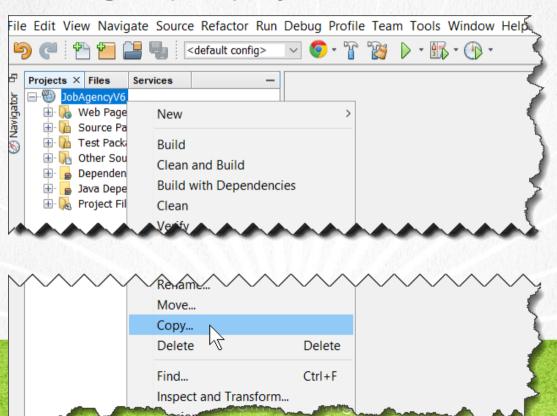

it open:

#### **JAVASERVER FACES COURSE**

#### 2. COPY THE PROJECT

## We copy the JobAgencyV6 project:

#### 2. COPY THE PROJECT

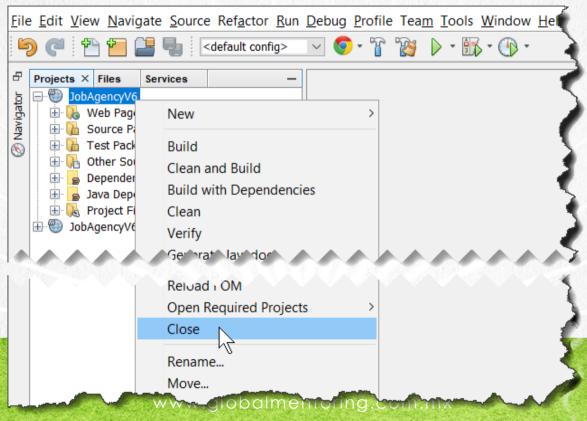

We copy the JobAgencyV6 project, we rename it to JobAgencyV7 and deposit it in the new path shown:

Copy Project			
Copy "JobAgencyV	6" To:		
Project <u>N</u> ame:	JobAgencyV7		
Project <u>L</u> ocation:	C:\Courses\JSF\Lesson09		Browse
Project Folder:	C:\Courses\JSF\Lesson09\Jo	bAgencyV7	
WARNING: This operation will not copy hidden files. If this project is under version control, the copy may not be versioned.			
		Сору	Cancel

## 3. CLOSE THE PROJECT

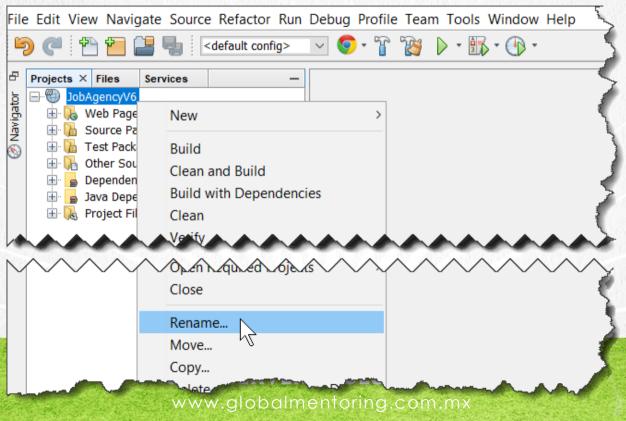

We closed the previous project, and left only the new one

open:

#### 4. RENAME THE PROJECT

Change the name of the project to JobAgencyV7:

## 4. RENAME THE PROJECT

Change the name of the project to JobAgencyV7:

Rename Project	×
Rename Project "JobAgencyV6	н
✓ Change Display Name:	JobAgencyV7
☑ Change ArtifactID:	JobAgencyV7
Rename Folder:	JobAgencyV7
	OK Cancel

#### **JAVASERVER FACES COURSE**

## 5. MODIFY THE JAVA CLASS

Open the Candidate.java class and perform the following actions:

```
Remove the city property
Remove the getCity () method
Remove the setCity () method
```

Add the following property:

```
private long cityId;
```

Generate the getter and setter methods for this new property

## Candidate.java:

#### Click to download

```
package beans.model;
import java.util.Date;
import javax.inject.Named;
import javax.enterprise.context.RequestScoped;
import org.apache.logging.log4i.*;
@Named
@RequestScoped
public class Candidate {
    Logger log = LogManager.getRootLogger();
    private String name;
    private String lastName;
    private int desiredSalary;
    private Date birthdate;
    private String zipCode;
    private String cityId;
    private String comment;
    public Candidate() {
        log.info("Creating the Candidate object");
        this.setName("Introduce your name");
    public String getName() {
        return name;
```

## Candidate.java:

#### Click to download

```
public void setName(String name) {
    this.name = name:
public String getLastName() {
    return lastName;
public void setLastName(String lastName) {
    this.lastName = lastName;
public int getDesiredSalary() {
   return desiredSalary;
public void setDesiredSalary(int desiredSalary) {
    this.desiredSalary = desiredSalary;
public Date getBirthdate() {
   return birthdate;
public void setBirthdate(Date birthdate) {
    this.birthdate = birthdate;
public String getZipCode() {
    return zipCode;
```

## Candidate.java:

#### Click to download

```
public void setZipCode(String zipCode) {
    this.zipCode = zipCode;
}

public String getCityId() {
    return cityId;
}

public void setCityId(String cityId) {
    this.cityId = cityId;
}

public String getComment() {
    return comment;
}

public void setComment(String comment) {
    this.comment = comment;
}
```

## 6. MODIFY THE PROPERTIES FILE

Open the messages.properties file and make the following changes:

Delete the following field:

```
vacanteForm.city=City
```

Add the new fields

```
vacanteForm.cityId=City
vacanteForm.select=-- Select --
```

Make the same changes in the messages\_es.properties file in the corresponding language.

## menssages.properties:

```
vacantForm.name=Name
vacantForm.lastName=Last Name
vacantForm.desiredSalary=Desired Salary
vacantForm.birthdate=Birthdate
vacantForm.zipCode=Zip Code
vacantForm.send=Send
vacantForm.comment=Comment
vacantForm.show=Show
vacantForm.hide=Hide
vacantForm.cityId=City
vacantForm.select=-- Select ---
```

#### **JAVASERVER FACES COURSE**

## messages\_es.properties:

```
vacantForm.name=Nombre
vacantForm.lastName=Apellido
vacantForm.desiredSalary=Sueldo Deseado
vacantForm.birthdate=Fecha de nacimiento
vacantForm.zipCode=Codigo Postal
vacantForm.send=Enviar
vacantForm.comment=Comentario
vacantForm.show=Mostrar
vacantForm.hide=Ocultar
vacantForm.cityId=Ciudad
vacantForm.select=-- Seleccionar ---
```

#### **JAVASERVER FACES COURSE**

#### 8. MODIFY THE XHTML FILE

Modify the index.xhtml file. We are going to make several changes:

1) Remove the following tag:

```
<h:inputText id="city" required="true" value="#{candidate.city}" />
```

2) Insert the following code instead of the one we have removed:

## 8. MODIFY THE XHTML

Search for h: outputLabel for the cityld field and make the following changes:

Change the h: ouputLabel from:

```
<h:outputLabel for="city" value="#{msgs['vacantForm.city']}"</pre>
```

By the following:

```
<h:outputLabel for="cityId" value="#{msgs['vacantForm.cityId']}" />
```

## 8. MODIFY THE XHTML FILE

Change the h: message from:

```
<h:message for="city" />
```

By the following:

```
<h:message for="cityId" />
```

The index.xhtml file should be as follows:

#### **JAVASERVER FACES COURSE**

## index.xhtml:

#### Click to download

```
<!DOCTYPE html>
<html xmlns="http://www.w3.org/1999/xhtml"
     xmlns:h="http://java.sun.com/jsf/html"
     xmlns:f="http://xmlns.jcp.org/jsf/core">
   <h:head>
       <title>Job Agency V7</title>
   </h:head>
   <h:bodv>
       <h:form id="vacantForm">
           <h:messages globalOnly="true" ></h:messages>
           <t.r>
                  <h:outputLabel for="name" value="#{msqs['vacantForm.name']}" />
                  <h:inputText id="name" required="true" value="#{candidate.name}" />
                  <h:message for="name" />
              <t.r>
                  <h:outputLabel for="lastName" value="#{msqs['vacantForm.lastName']}" />
                  <h:inputText id="lastName" required="true" value="#{candidate.lastName}" />
                  <h:message for="lastName" />
```

## index.xhtml:

```
>
    >h:outputLabel for="desiredSalary" value="#{msqs['vacantForm.desiredSalary']}" />
    <h:inputText id="desiredSalary" required="true"
                   value="#{candidate.desiredSalary}">
           <f:validateLongRange minimum="500" maximum="5000"/>
       </h:inputText>
    <h:message for="desiredSalary" />
<t.r>
    <h:outputLabel for="birthdate" value="#{msqs['vacantForm.birthdate']}" />
    <h:inputText id="birthdate" required="true"
                   value="#{candidate.birthdate}">
           <f:convertDateTime pattern="MM/dd/yyyy" />
       </h:inputText>
    <h:message for="birthdate" />
</t.r>
<t.r>
    <h:outputLabel for="zipCode" value="#{msqs['vacantForm.zipCode']}" />
    <h:inputText id="zipCode" immediate="true"
                   onchange="this.form.submit()" required="true"
                   value="#{candidate.zipCode}"
                   valueChangeListener="#{vacantForm.zipCodeListener}" />
    /
</t.r>
```

## index.xhtml:

#### Click to download

```
>
       <h:outputLabel for="cityId" value="#{msgs['vacantForm.cityId']}" />
       >
           <h:selectOneMenu id="cityId" required="true" value="#{candidate.cityId}">
              <f:selectItem itemLabel="#{msgs['vacantForm.select']}" itemValue="" />
              <f:selectItem itemLabel="Phoenix" itemValue="1" />
              <f:selectItem itemLabel="Little Rock" itemValue="2" />
              <f:selectItem itemLabel="Huntsville" itemValue="3" />
           </h:selectOneMenu>
       /
   <t.r>
       \langle t.d \rangle
           <h:commandLink actionListener="#{vacantForm.hideComment}"
                        immediate="true" rendered="#{!vacantForm.commentSent}"
                        value="#{msgs['vacantForm.show']}" />
           <h:commandLink actionListener="#{vacantForm.hideComment}"
                        immediate="true" rendered="#{vacantForm.commentSent}"
                        value="#{msqs['vacantForm.hide']}" />
       </t.d>
```

## index.xhtml:

#### Click to download

## 9. MODIFY THE JAVA FILE

Modify the VacanteForm.java file.

Replace the code of the zipCodeListener ():

```
UIInput cityInputText = (UIInput) uiViewRoot.findComponent("vacanteForm:city");
String city = "Phoenix";
cityInputText.setValue(city);
cityInputText.setSubmittedValue(city);
```

#### By the following:

```
UIInput cityInputText = (UIInput) uiViewRoot.findComponent("vacanteForm:cityId");
Long cityId = 1L;
cityInputText.setValue(cityId);
cityInputText.setSubmittedValue(Long.toString(cityId));
```

## VacanteForm.java:

#### Click to download

```
package beans.backing;
import beans.model.Candidate;
import javax.inject.*;
import javax.enterprise.context.RequestScoped;
import javax.faces.application.FacesMessage;
import javax.faces.component.*;
import javax.faces.context.FacesContext;
import javax.faces.event.*;
import org.apache.logging.log4j.*;
@Named
@RequestScoped
public class VacantForm {
    Logger log = LogManager.getRootLogger();
    @Inject
    private Candidate candidate;
    private boolean commentSent = false;
    public VacantForm() {
        log.info("Creating VacantForm object");
    public void setCandidate(Candidate candidate) {
        this.candidate = candidate:
```

## VacanteForm.java:

#### Click to download

```
public String send() {
    log.info("send() Name=" + this.candidate.getName());
    log.info("send() Desired Salary=" + this.candidate.getDesiredSalary());
    if (this.candidate.getName().equals("John")) {
        if (this.candidate.getLastName().equals("Smith")) {
            String msg = "Thanks, but John Smith is already working with us.";
            FacesMessage facesMessage = new FacesMessage (FacesMessage.SEVERITY ERROR, msg);
            FacesContext facesContext = FacesContext.getCurrentInstance();
            String componentId = null; //This is a global message
            facesContext.addMessage(componentId, facesMessage);
            return "index";
        return "success"://success.xhtml
    } else {
        return "failure"; //failure.xhtml
```

## VacanteForm.java:

#### **EXERCISE CONCLUSION**

With this exercise we put into practice the concept of components in JSF.

We use the SelectItem component, which will be one of the components that we will use the most in our JSF forms.

One of the great advantages of using JSF components is that many of the components are just as simple to apply or use once having the basics of handling JSF components.
