Hello, I hope you're ready to begin.

Let's review the general agenda of the HTML, CSS & JAVASCRIPT COURSE.

Are you ready? Let's go!

We are going to review the general content of the HTML, CSS & JavaScript course:

Starting.- Introduction to HTML: In this section we will study an introduction to HTML. We will also carry out the installation of the tools that we will use throughout the course and we will create the first HelloWorld with HTML project.

Knowing the bases.- HTML Components: In this section we will review several of the most common elements that we will use in HTML, text components, lists, hyperlinks, inclusion of images, among several other components. We will create several exercises to put into practice each of these concepts.

Knowing the styles.- Introduction to CSS: We will review an introduction to CSS (Cascade Style Sheet). We will also review the concept of DOM (Document Object Model) to understand how CSS styles work. We will create an exercise to start with the use of CSS styles.

Applying design.- Use of CSS Styles: In this section we will review the types of selectors we have in CSS, and create an exercise to understand these concepts.

Combining technologies.- Tables and Forms with HTML and CSS: In this section we will use tables in HTML, as well as define what an HTML form is and we will apply CSS styles to these forms to beautify them. We will create several exercises to put these concepts into practice.

Knowing JS.- Introduction to JavaScript: We will study an introduction to JavaScript. We will see the utilities of this language, as well as the scope of it within the Web pages. We will also see the role that JavaScript plays in an enterprise application. We will create an exercise to see how to integrate JavaScript with our HTML pages.

Structuring our code.- Functions with JavaScript: We will learn the concept of functions with JavaScript. At the end JavaScript adds dynamism to our HTML pages and this behavior will be encapsulated in JavaScript functions. We will do an exercise to put this concept into practice.

Combining Technologies.- HTML, CSS and JavaScript: We will see how to integrate the 3 HTML, CSS and JavaScript technologies in a single project. We will create a form which integrates the 3 technologies. And at the end of the exercise we will have integrated the 3 technologies in a single project.

Broadly speaking this is the general agenda of the course of HTML, CSS and JavaScript. These are just some of the many more topics we will learn throughout this course. So if you're ready, let's start immediately.

ONLINE COURSE

HTML, CSS & JAVASCRIPT

Author: Ubaldo Acosta

HTML, CSS & JAVASCRIPT COURSE
www.globalmentoring.com.mx

At Global Mentoring, we promote the passion for Java Technology. We invite you to visit our website where you will find Java Online courses from Basic, Intermediate and Advanced Levels, and thus become an expert Java programmer.

Here we present our online courses:

- ✅ Java Fundamentals
- ✅ Java Programming
- ✅ Java with JDBC
- ✅ HTML, CSS and JavaScript
- ✅ Servlets and JSP's

- ✅ Struts Framework
- ✅ Hibernate Framework & JPA
- ✅ Spring Framework
- ✅ JavaServer Faces
- ✅ Java EE (EJB, JPA and Web Services)
